

# COMPACT WHEELED LOADERS COMPACT TRACKED LOADERS

Also available with STAGE 3A engine.

Concrete solutions. Always.

**19sk**  
**20TL**

Operating weight 4.350 kg  
Engine power 53,7 kW (73,0 HP)

Operating weight 5.470 kg  
Engine power 53,7 kW (73,0 HP)

 **EUROCOMACH**<sup>®</sup>

The 19SK (skid loader) and 20TL (tracked skid loader) models, with roll-bar and cabin, offer comfort and visibility at the top of their class, combining excellent manoeuvrability with unequalled versatility.

# DRIVING COMFORT.

## CARRIAGE WITH OSCILLATING ROLLERS (20TL)

The semi-carriages with five oscillating rollers, offer driving comfort combined with unparalleled operative stability.

The skid moves with agility and safely in any terrain, making full use of the rollers thanks to the width of the 450 mm rubber tracks and a ground pressure of  $0.34 \text{ kg/cm}^2$ .

STABILITY

COMFORT

The cabin conforms to ROPS/FOPS safety regulations, offering ample operative space, making work more comfortable and productive.. It is equipped with a mechanical suspension seat (heated and pneumatic suspension seat optional extra) that can be adjusted length-wise.

The safety bars offer a comfortable support for arms and prevent involuntary activation of the machine. The height regulation improves ergonomics and facilitates the correct use of the joystick.

### USB RADIO

The radio has a BLUETOOTH connection with speakerphone, USB socket, SD/SDHC memory card reader.

# CONTROL AND EFFICIENCY.

Driving performance is assured by two well-balanced electronically-commanded ergonomic joysticks, whose response can be regulated in line with the operator's individual sensitivity. The multifunctional display allows the operator to control the vehicle's status and select the usage configurations via simple and intuitive commands.

The practical rubber foot board offers comfort, safety and freedom of movement.

## 7" TFT ACTIVE MATRIX DISPLAY

The multifunctional display allows the operator to control the vehicle's status and select the usage configurations via simple and intuitive commands.

- Management of time and maintenance
- Engine revs
- Working pressure
- Faults

**RADIATOR CLEANING FUNCTION:** the Fan Drive can be set to rotate in the opposite direction to remove dirt and dust from the radiator.

## DRIVING MODES

The operator's needs are at the centre of the design.

With a simple display command you can choose between three driving modes that reflect the different levels of sensitivity of the driver: a personalised extra to ensure top performance at all times.

# EVERY CONTROL IS IN YOUR HANDS.

## COMMANDS AND CONTROLS

Both models have two travel modes: first gear for reduced speed and greater force and second gear for greater transference speed. Everything is controlled by a practical button on the left hand grip.

The right hand grip controls lifting and the descent of the arm, closing and opening of the device and the capacity of the auxiliary hydraulic system.

The potentiometric commands located on the left dashboard are used to regulate the progress of the vehicle and manage the capacity of the high-flow system (from 0 -160 lt/min).

Sound comfort and the damping of vibrations is paramount in the design through the isolation of the cabin on four viscoelastic supports.

The heating and air conditioning system assure operative comfort in any climatic condition.

Passage to the driver seat is easy, fast and obstacle-free due to the large concealed opening front section. In addition, the driver enjoys the benefit of being able to work in complete tranquillity with the door closed or open.

## VISIBILITY

The special design of the protection structures and the particularly low positioning of the arms offers a very extensive visual field.

The windscreen and the large side glass means assure that visibility is optimal in the two skids.

Great attention is dedicated to operative lighting: in addition to the street circulation lights positioned on the arms, the vehicles are equipped with four work lights on the cabin (two front and two back).

# MAINTENANCE HAS NEVER BEEN SO EASY.

The tilting of the hydraulic-controlled cabin permits immediate access to the distributor and the main components: just a few actions that can bring added value.

Ease of maintenance and simplicity of intervention, combined with the strategic positioning of the main components reduces operator down time.

## ACCESSIBILITY

The cabin can be raised via a special practical hydraulic system, the control for which is positioned on the outside of the machine.

Components related to the three-phase motor are easily reached by opening the rear hood. All the filters (gas and air), in addition to the dip stick and the tank for the engine and hydraulic oil, can be found in this part of the machine.

The rear right corner houses the cabin's hydraulic lifting controls.

The driver's foot board has a practical discharge hatch that makes cleaning easy.

The manual and electronic petrol tanks are easily reached on the left side of the machine.

All the access points for daily controls and ordinary maintenance interventions are concentrated in defined areas, making the most of machine stop time.

## ACCESSIBILITY

Common or dedicated access areas make every maintenance operation quick and easy.

SPACE FOR SERVICES.

# VERSATILITY WITHOUT LIMITS.

**EARTH MOVEMENT**

**ROAD MAINTENANCE**

**FORESTATION**

**LOADING - UNLOADING**

The power engine of the 19SK and 20TL compact shovels, in combination with the auxiliary high-flow system with maximum capacity of 160 litres at 280 bars, guarantees considerable versatility of use of all the equipment on the market. Practicality and operative safety are supported by the number of quick connection points and control of unloading pressure.

# FLEXIBILITY, COMPACTNESS, ERGONOMICS.

The rear counterweight ensures excellent stability and solidity and the safety of all the functional parts, protecting them from serious knocks.

## EFFICIENCY AND CONSUMPTION

The heart of the skid is the efficient and silent YANMAR 4TNV98CT - Stage 5 engine, designed and constructed to optimise performance and lower consumption.

The Fan Drive hydraulic cooling fan, that instantaneously regulates the speed of rotation in line with engine requirements, improves engine performance whilst containing noise and temperature.

## SAFETY

The safety bars prevent accidental activation of the machine.

Safety belts, cabin structures and roll-bars certified ROPS/TOPS and FOPS level 1 offer all the safety required in the cabin in case of an accident.

# POWER AND PERFORMANCE

## PERFORMANCE

Great attention has been paid to the design of the Vertical Lift system that permits a high lifting level maintaining the stability of the machine at every loading position. Operative capacity, at 50% of tilting load, is 2,050 kg for the tracked model and 1,450 kg for the tyre model.

An efficient system of auto-levelling permits the lifting of pallet loads with complete safety and control.

These important features, combined with a travel speed close to 18 km/h, make the shovel suitable to any construction site need.

## HYDRAULIC SYSTEM

The efficient Loading Sensing system permits fuel savings (up to 15%) due to an efficient distribution of power.

The power of the hydraulic components is assured by a Load Sensing axial piston pump with variable capacity, of 160 litres/minute and maximum pressure of 280 bars.

Hydrostatic transmission is guaranteed by the combination of a tandem electronically-controlled pump and radial engines. The maximum traction force is 4,450 daN for the tyre model and 5,100 daN for the tracked model.

## THE NEW ENGINE

# STAGE V

TURBO engine: YANMAR 4TNV98CT - STAGE 5  
with EGR, Common Rail and  
DPF anti-particle filter  
Power: 53.7 kw / 73 HP @ 2600 rpm  
Cylinders: 3319 cc No. of cylinders: 4

Advantages of rear thermal engine:  
- reduced heating (blowing fan)  
- reduced cabin noise  
- reduced cabin heat  
- increased cabin space

In compliance with the current standards for reduction of exhaust emissions, the heat engine is equipped with two exhaust post-treatment systems: DPF particulate filter and DOC oxidation catalyst.

The regeneration system that cleans the DPF starts working automatically but may be disabled during use in areas with a risk of fire.

# STAGE V

The innovative BOSCH-REXROTH electronic system makes the most of all the available power of the STAGE 5 diesel system, bringing the 19SK and 20TL models to the top of the class in terms of power and performance.

# THE IMPORTANCE OF BEING RELIABLE.

## RELIABILITY

Designed and tested for high performance coupled with constant reliability.

The definition of the materials, selection of parts and design of the structures have ensured that the machine can cope with the most trying and demanding working requirements.

This includes the integral frame, the substantial arm sections, the rear knock-protector and the rear steel aeration hood that improve the efficiency and the lifespan of the product.

PERFORMANCE

# EUROCOMACH CONFIGURATION SUPPORT (ECS): ENDLESS POSSIBILITIES OF CUSTOMIZATION.

## UTILITIES AND SERVICES

We listen to all your needs so we can propose the best possible machine solution.  
We consider our products to be not only simple machines but the best opportunity for our clients.  
Among the services provided, the following are available:

- Customized paint
- Various types of tracks
- Auxiliary line hookups customized by type and quantity
- Additional equipment

The many configurations available allow you to make the best choice in relation to the work to be performed.

# SATELLITE MONITORING SYSTEM

The satellite control system allows to:

- Locate the machine's position
- Receive alerts via SMS or e-mail
- Monitor malfunctions such as: high water temperature, low engine oil pressure, low hydraulic fluid pressure, clogged filters, etc.
- Monitor actual working hours
